

LONGHAIR FOLD

Scale of points (see also General Preface)

<u>Head & Neck</u>	15	The head is to be well-rounded and blended into a short neck. The cheeks are well-developed, with jowls in the male. The face is rounded with a firm chin and well-developed whisker pads.
<u>Ears</u>	30	The ears are small and folded forward and downward at the top of the ear pocket. The small, tightly folded (double-folded) ear is preferred to the larger, more loosely folded (single-fold) ear. In the mature cat, a definite fold line will NOT be visible due to the longer hair.
<u>Eye color</u>	5	Eye color does not need to conform to coat color. Allowance should be made for development of eye color up to the age of 18 months. Objection: weak eye color.
<u>Nose</u>	5	The nose is short with a gentle curve. A brief stop is acceptable, but a definite break shall be considered a fault.
<u>Tail</u>	10	The tail is medium to long in length, tapering slightly and ending in a modified blunt tip. The tail should be flexible and in proportion to the body, with a full plume.
<u>Body</u>	15	The overall appearance should be that of a solid, well-proportioned cat, medium to large in size. The body should be the same width from the shoulders to the hips. There should be no lack of mobility due to abnormal shortening or coarseness of the leg joints.
<u>Coat Coat Color & Markings</u>	10	The medium-long, soft, resilient coat should be full of life, and stand away from the body. Both a frontal ruff and britches are desirable. Any color or combination of colors/patterns is acceptable.
<u>Condition</u>	5	Hard and muscular with no indication of fat or emaciation. An appearance of good health and vitality in a well-groomed manner.

WITHHOLD Rigid tail, straight ears, short coat, lack of mobility in legs.

NOTE CFF Rules of Registration allow the use of the American Shorthair, British Shorthair and the Scottish Fold as outcrosses for the Longhair Fold. Do not penalize for difference in type as long as the cat meets the above standard.
